ANNUAL BROODCORN SUMMARY FOR 1940
(Issued by Illinois Cooperative Crop Reporting Service)

B R O O D C O R N

ILLINOIS: The production of Illinois broodcorn in 1940 is estimated at 8,800 tons, 17 percent larger than the 7,500 tons estimated for 1939 and 5 percent less than the 10-year (1929-38) average production of 9,240 tons, according to the December crop summary issued by the ILLINOIS and FEDERAL DEPARTMENTS OF AGRICULTURE. The acres harvested in 1940 are placed at 30,000 or 7 percent larger than the revised 1939 acreage of 28,000 but 11 percent less than the 1929-38 average of 38,000 acres. The yield per acre in 1940 was 590 pounds and compares with the revised 1939 yield of 535 pounds and the 10-year average yield of 492 pounds.

Planting and early growing season was too cool and the crop did not do much good until the extreme heat of July 20 to August 6. During this period of very high temperatures, broodcorn made wonderful growth. In late July plant lice infestation became the most severe in years and was a little earlier than usual. However, the lice left the plants before the crop headed and very little damage was done. Quality of the crop was very good, with very little crooked brush, minimum amount of stain, and much longer brush than usual. Harvest was about a week late but in very good drying weather.

UNITED STATES: With the exception of New Mexico, all States which made sharp acreage reductions in broodcorn a year earlier came back into production this year with both larger acreages and yields, and the 1940 crop now indicated is 12 percent above the 1938 level, and 34 percent above that of 1939. The production of 41,400 tons of broodcorn this year compares with 30,800 tons in 1939. Acreage harvested in 1940 at 279,000 is 21 percent larger than in 1939. Yields per acre were higher than a year ago in all States except New Mexico, where unfavorable conditions resulted in yields below earlier expectations.
